

**GLOBAL  
BIODIVERSITY**

## INFORMATION FACILITY

# The GBIF Metadata Framework - Implementation

Éamonn Ó Tuama

PIIB Metadata Workshop,  
Bogotá, 13-16 September, 2010

# Outline

- GBIF architecture – main components
- Related standards
- ISO 19139 and Data Quality
- Metadata and languages
- Knowledge Organisation Systems
- Regional Networks – expectations?

# Architecture: main components

A central metadata catalogue integrated in portal

A web based interface for searching/browsing

Many catalogues in network contributing metadata

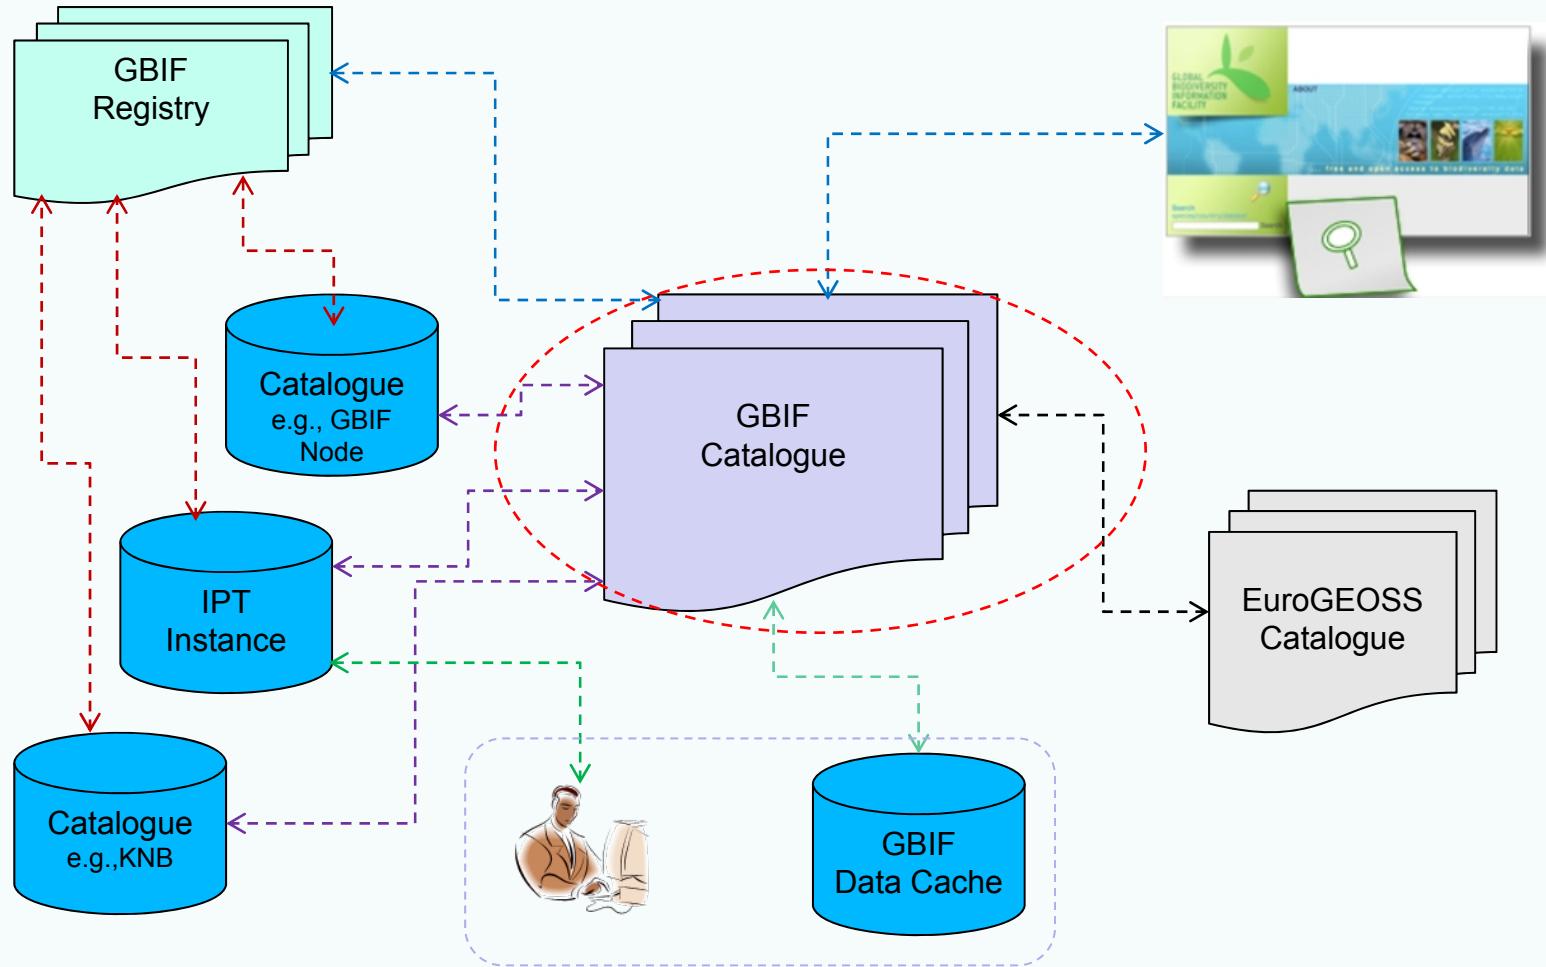

A registry to manage network entities

Standards based protocol for communications

Tools for editing metadata

*Goal:  
A gateway to  
enable  
discovery and  
re-use of data  
on the GBIF  
and other  
biodiversity  
networks*

# Architecture: main components

# Current Catalogue Implementation

Based on Metacat version 1.9.2

Reviewed two other systems: GeoNetwork, Mercury

Cassia unavailable at time of review

Plan report on Metacat based on implementation experience

Exploring use of lightweight replacement (Solr/Lucene)

# What kinds of Metadata?

Primary focus on metadata for datasets mediated via GBIF  
(collections, observations, names)

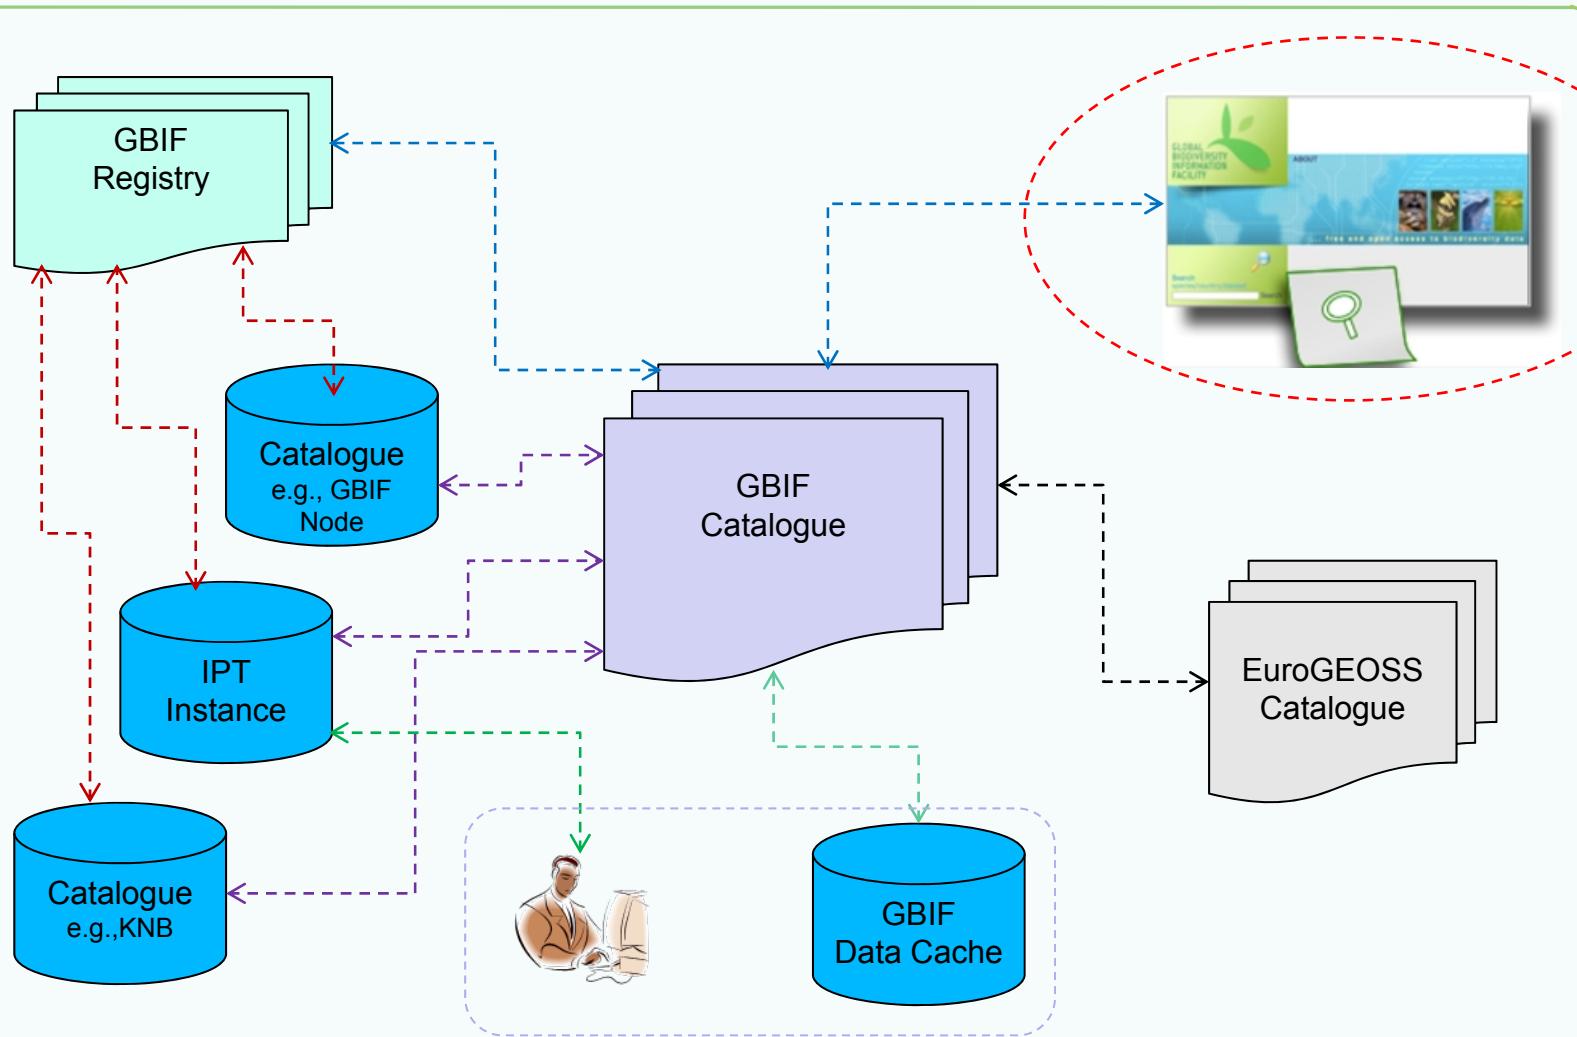

Metadata for inventory (prioritisation for digitisation)

Metadata for richer datatypes (e.g., associated ecological,  
environmental data)

- e.g., LTER and KNB networks with rich EML descriptions

Metadata for GBIF products (e.g., aggregated data, maps)?

# Architecture: main components

# Catalogue Search Interface

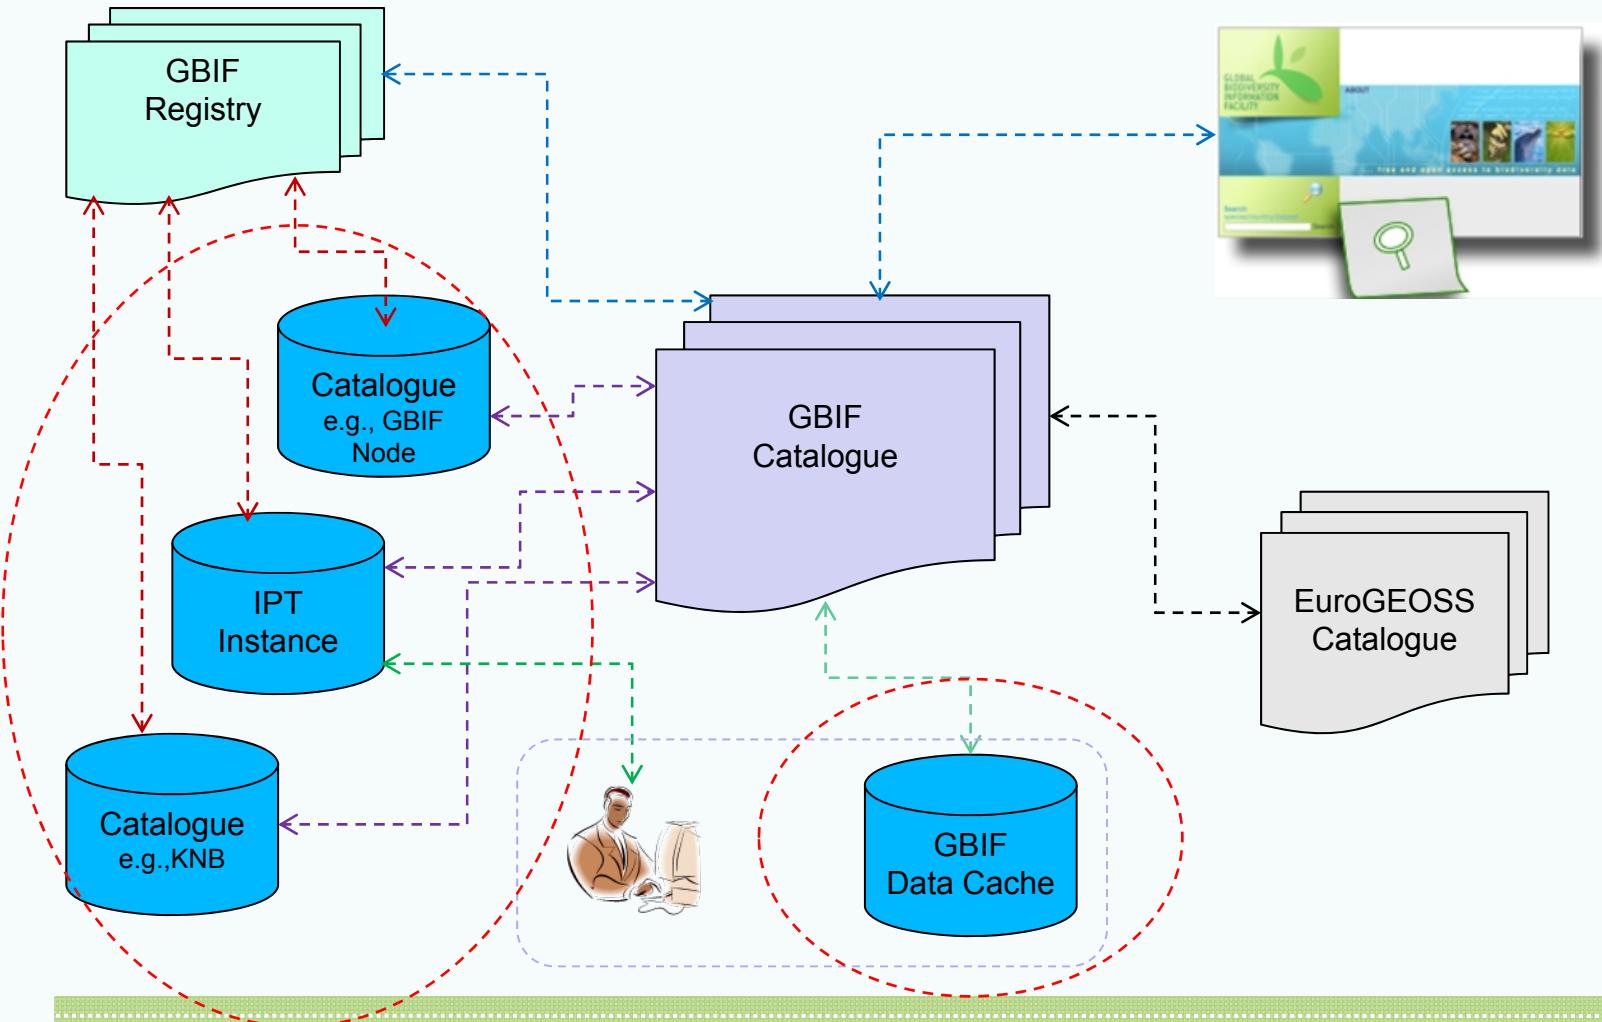

Simple and structured search; based on Spring framework  
(modification to Metacat)

Harvested metadata mapped to common search model (title;  
abstract; keywords; temporal, taxonomic, spatial coverages)

Returns full metadata as harvested

Links to corresponding datasets in GBIF portal

# Architecture: main components

# Sources of Metadata

GBIF Data Cache

GBIF Participants

- National/regional/organisation level catalogues
- Thematic catalogues, e.g., OBIS

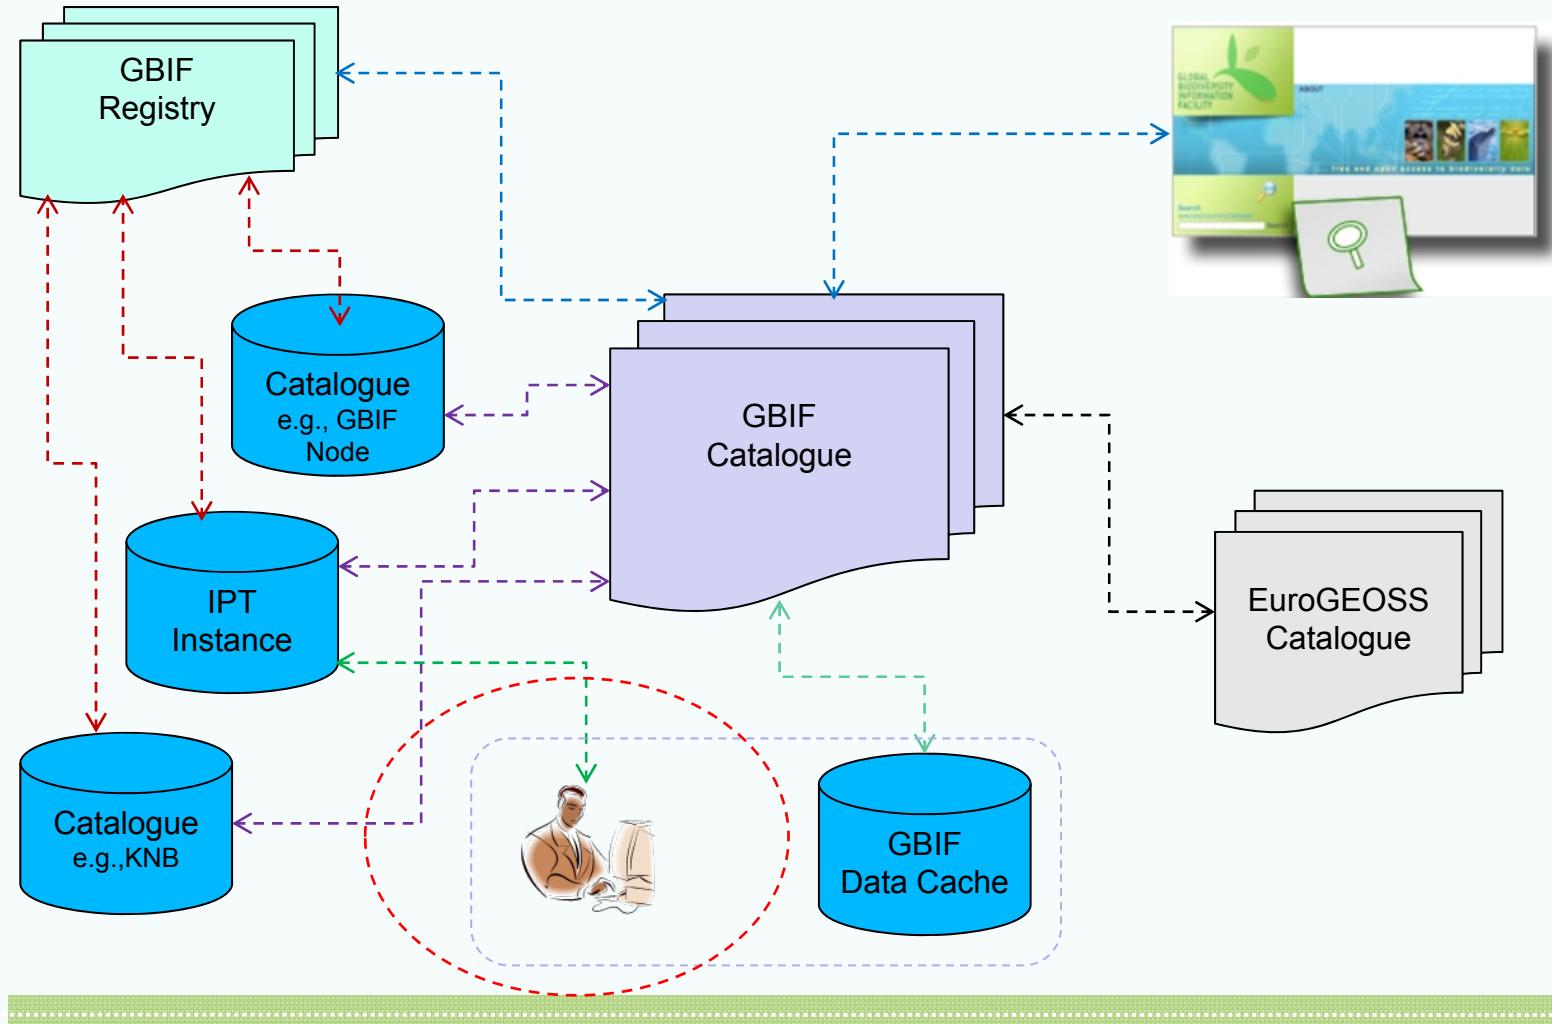

External networks

- e.g., Knowledge Network for Biocomplexity (KNB)

*Our approach:*

- *no imposed metadata standard or preferred catalogue implementation for participants*
- *avoidance of lossy conversions in submitting metadata*

# Architecture: main components

# Metadata Preparation

## Integrated Publishing Toolkit (IPT)

Includes integrated metadata editor

- metadata profile base extensions for NCD, IS
- document collections,
- dataset (Darwin Core) submitted as package

IPT still under development

Logged in as: admin | Logout 

 free and open access to biodiversity data

- outputs dataset and metadata as package (DwCA)
- EML 2.1.0
- submit via email or web application
- due in Q4 2010

# Architecture: main components

# Generating dataset metadata

via the  
UDDI  
registry,  
DiGIR,  
TAPIR  
BioCASe

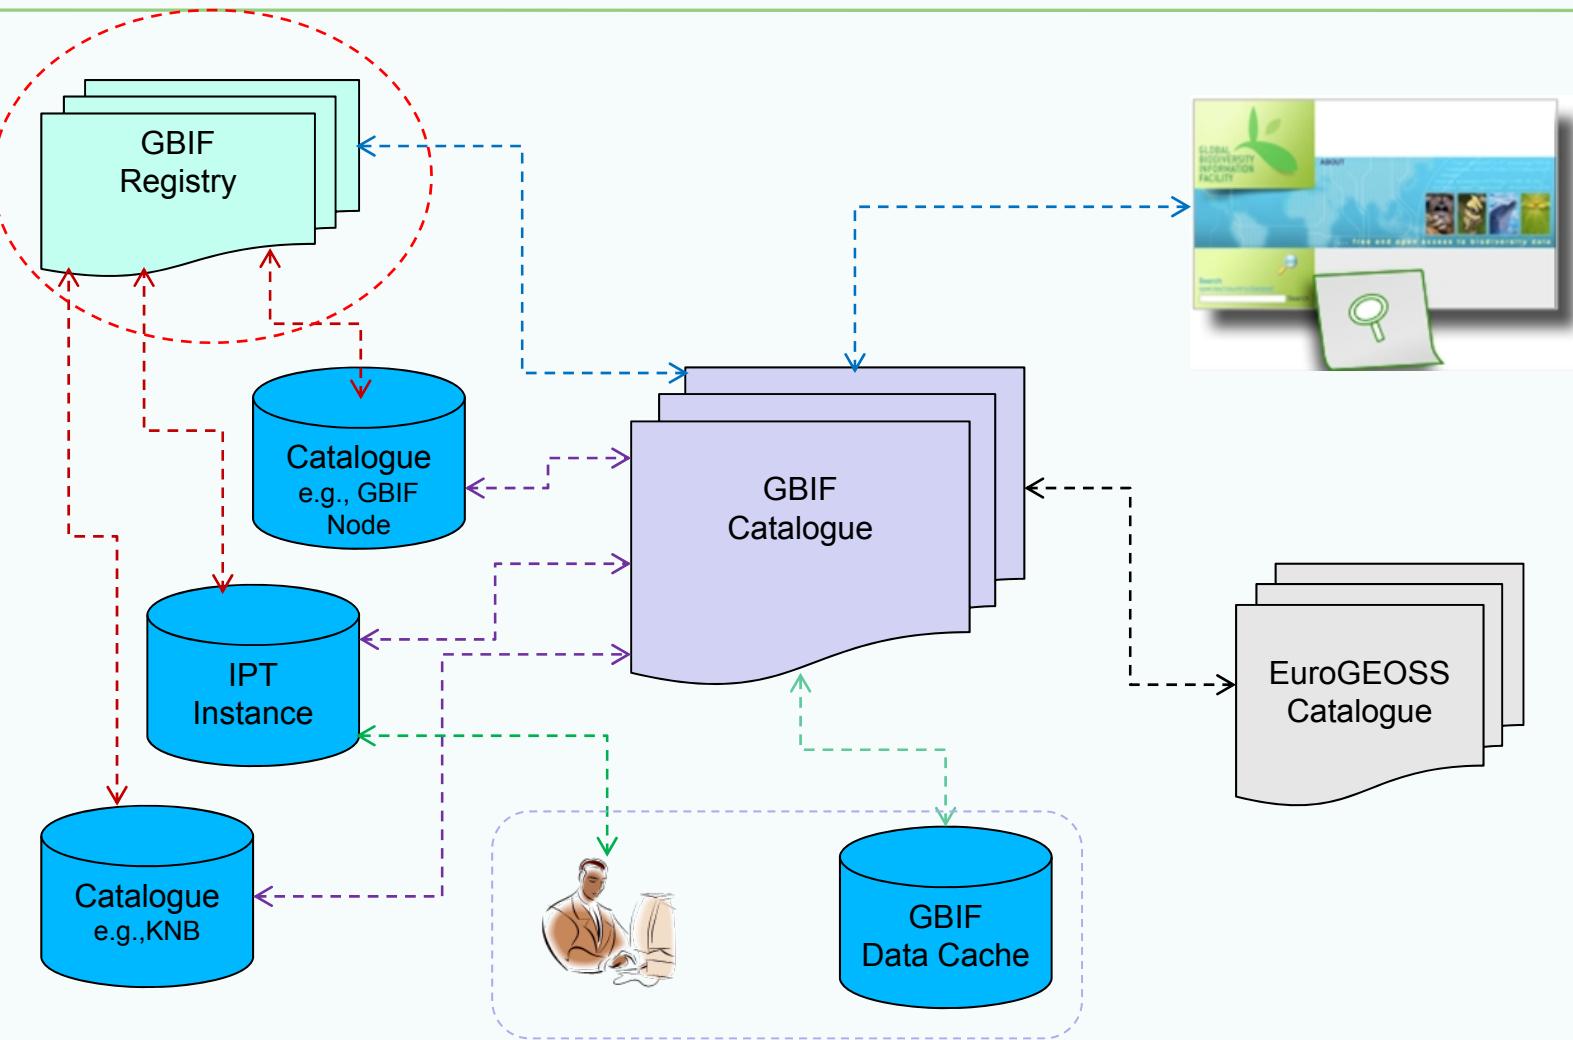

- Data provider details (Name; Website; GBIF participant; Description; Country; Added to portal; Information updated)
- Provider (DiGIR, BioCASe, TAPIR) binding
- Name
- Website
- Description
- Citation
- How to cite this dataset
- Basis of record
- Access point URL
- Added to portal
- Information updated
- Contacts (Name, Role, Address, Email, Telephone)
- Data networks

and via the  
indexing  
process -

- Taxonomic coverage
- Temporal coverage
- Spatial coverage

*An EML metadata document is generated for each dataset in the GBIF data cache*

# Architecture: main components

# The GBIF Registry

Extension of current UDDI

Several functions

- Stores end-point URLs for harvesting
- Rich model of GBIF network
- Reconciles persistent identifiers

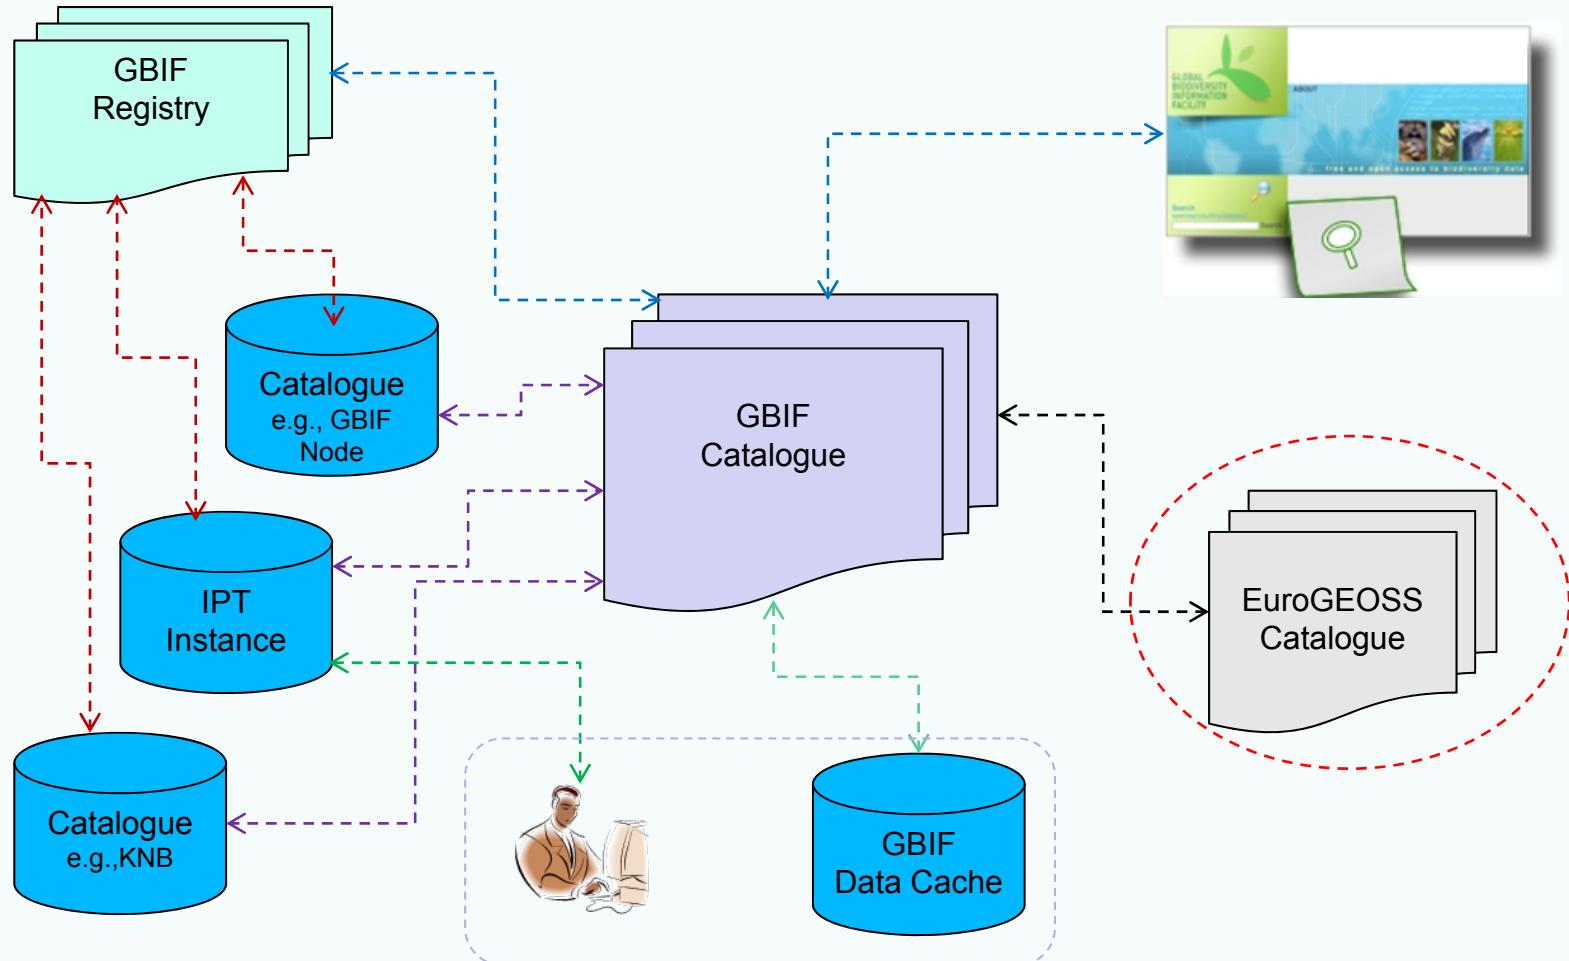

Under development

The screenshot shows the GBIF Registry homepage. At the top right, there is a login form with fields for 'username' (containing 'admin') and 'password' (containing 'admin'), and a 'Login' button. A message below the form says 'Just an admin account exists at the moment'. The top left features the GBIF logo and the text 'free and open access to biodiversity data GLOBAL BIODIVERSITY RESOURCES DISCOVERY SYSTEM (GBRDS)'. Below the header is a navigation bar with 'Home' (highlighted in green), 'Browse', 'Search', and 'Sign up' buttons.

The main content area displays a world map where green shading indicates the current worldwide distribution of everything registered within the GBIF network. A legend below the map shows a color scale from light green to dark green with the label 'NODE' and values '1' at both ends. To the right of the map, there is a 'Search' input field and a 'Search' button. On the far right, there are two sections: 'Top searches' (listing 'Nordgen', 'India', 'IPT', 'species', and 'bioinformatics') and 'Top 10 tags' (listing 'cribellum', 'cybertaxonomy', 'Eresidae', 'Penestomus', 'South', 'Africa', 'Wajane', and 'Zodariidae').

Below the map, the text 'GBRDS-Registry' and 'GBIF Global Biodiversity Resources Discovery System' is displayed. A note states: 'Currently the system is in its Alpha release. (In other words, don't expect anything fancy.) [\$YOUR\_FAVORITE\_EXCEPTION\_TYPE]Exception messages are common at this stage! Please use the [Google Code project's site](#) to report any defects or other issues'. At the bottom, it says 'At this stage, the UDDI data has been imported but should not be considered as final.' and 'Last build deployed on: June 3, 2010'. A footer at the very bottom says 'Comments to [jcuadra@gbif.org](mailto:jcuadra@gbif.org)'.

# Architecture: main components

# EuroGEOSS Broker

	<b>CSW</b>	<b>WMS</b>	<b>WFS</b>	<b>Others</b>
<b>Forest</b>	-	4 services (38 datasets)	-	-
<b>Biodiversity</b>	-	-	1 service	1 GBIF-service
<b>Drought</b>	2 services (102 datasets)	6 services (161 datasets)	3 services (40 datasets)	1 WFS-G
<b>Generic</b>	2 services	-	-	-

**CSW** - « Catalogue Service for the Web »

Service used to request metadata catalogues of datasets and services.

**WMS** - « Web Map Service »

Service used to download geospatial information in a raster format. WMS are mainly view services.

**WFS** - « Web Feature Service »

Service delivering raw geospatial data (under GML). WFS are mainly downloading services.

**WFS-G**

WFS used to deliver gazetteer service (producing Bounding Box from toponyms).

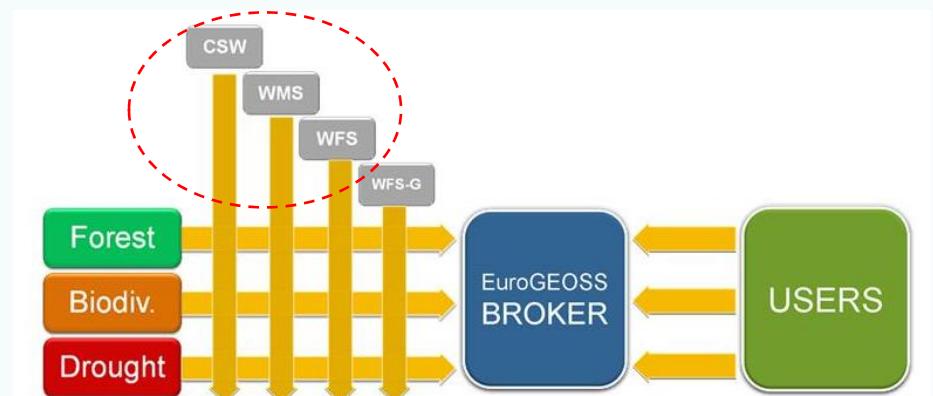

**GBIF**

Specific query interface connected to the GBIF (Global Biodiversity Information Facility) metadata catalogue.

*GBIF is preparing services  
for the EuroGEOSS broker*

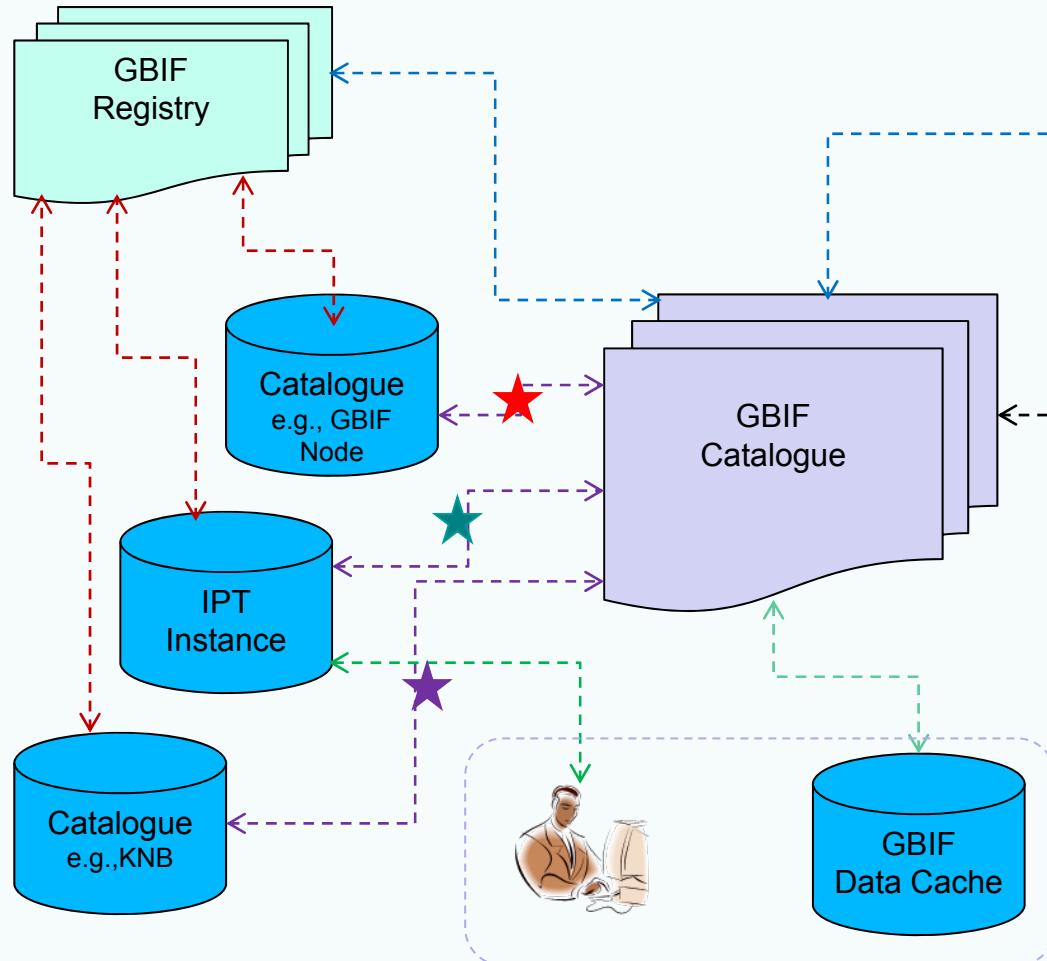

- Web Map Service
- Web Feature Service
- CSW -> OAI-PMH

*(Open Archives Initiative –  
Protocol for Metadata Harvesting)*

Source: <http://www.eurogeoss.eu/broker/default.aspx>

# Architecture: main components

*Communication  
protocols*

- ★ OAI-PMH
- ★ Direct payload
- ★ Metacat-to-Metacat

# OAI-PMH

- Open Archives Initiative Protocol for Metadata Harvesting
- Providing a low-barrier mechanism for interoperability across distributed metadata repositories
- Data providers expose metadata; Service providers consume metadata through a client application known as a harvester that issues OAI-PMH service requests over HTTP:

1. GetRecord      2. Identify      3. ListIdentifiers

4. ListMetadataFormats    5. ListRecords    6. ListSets

1. return individual record    2. retrieve information about repository    3. retrieve headers of records

4. return metadata formats available    5. return records from repository    6. retrieve set structure (groupings) of repository

<http://www.ncddc.noaa.gov/technology/metadataandxml/view>

Open source INSPIRE-compliant MD editor  
(planned multilingual functionality)

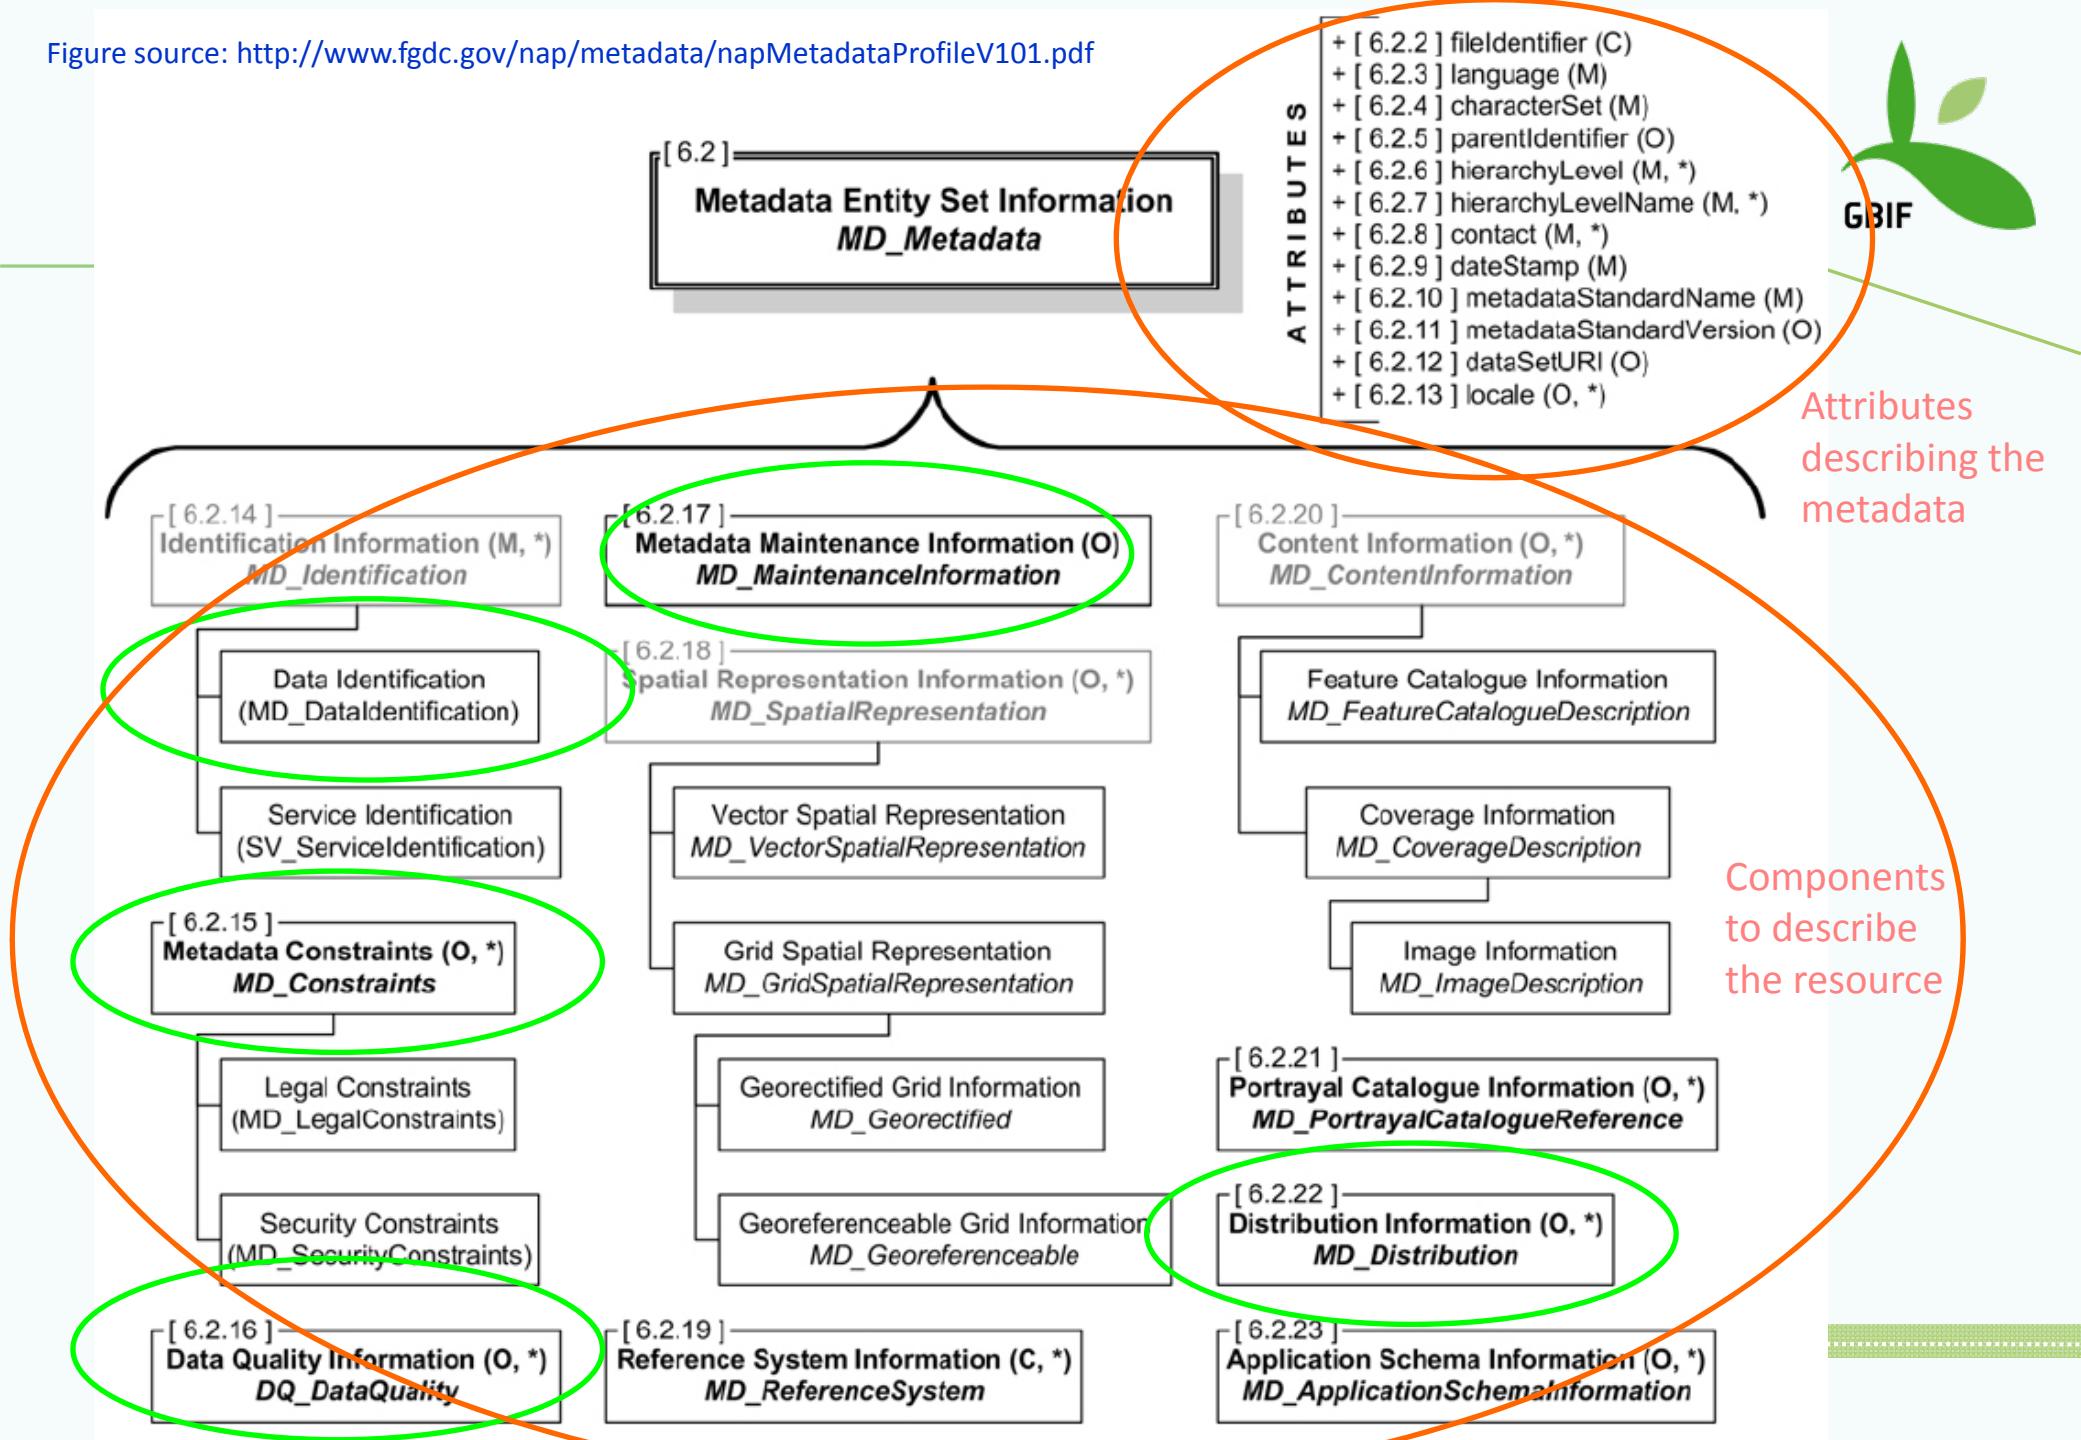

<http://www.inspire-geoportal.eu/EUOSME/>

EML to FGDC Biological Profile

<https://code.ecoinformatics.org/code/eml/trunk/lib/eml2tonbii/>

EML to ISO 19139

<http://rs.gbif.org/schema/eml/eml2iso19139.xsl>

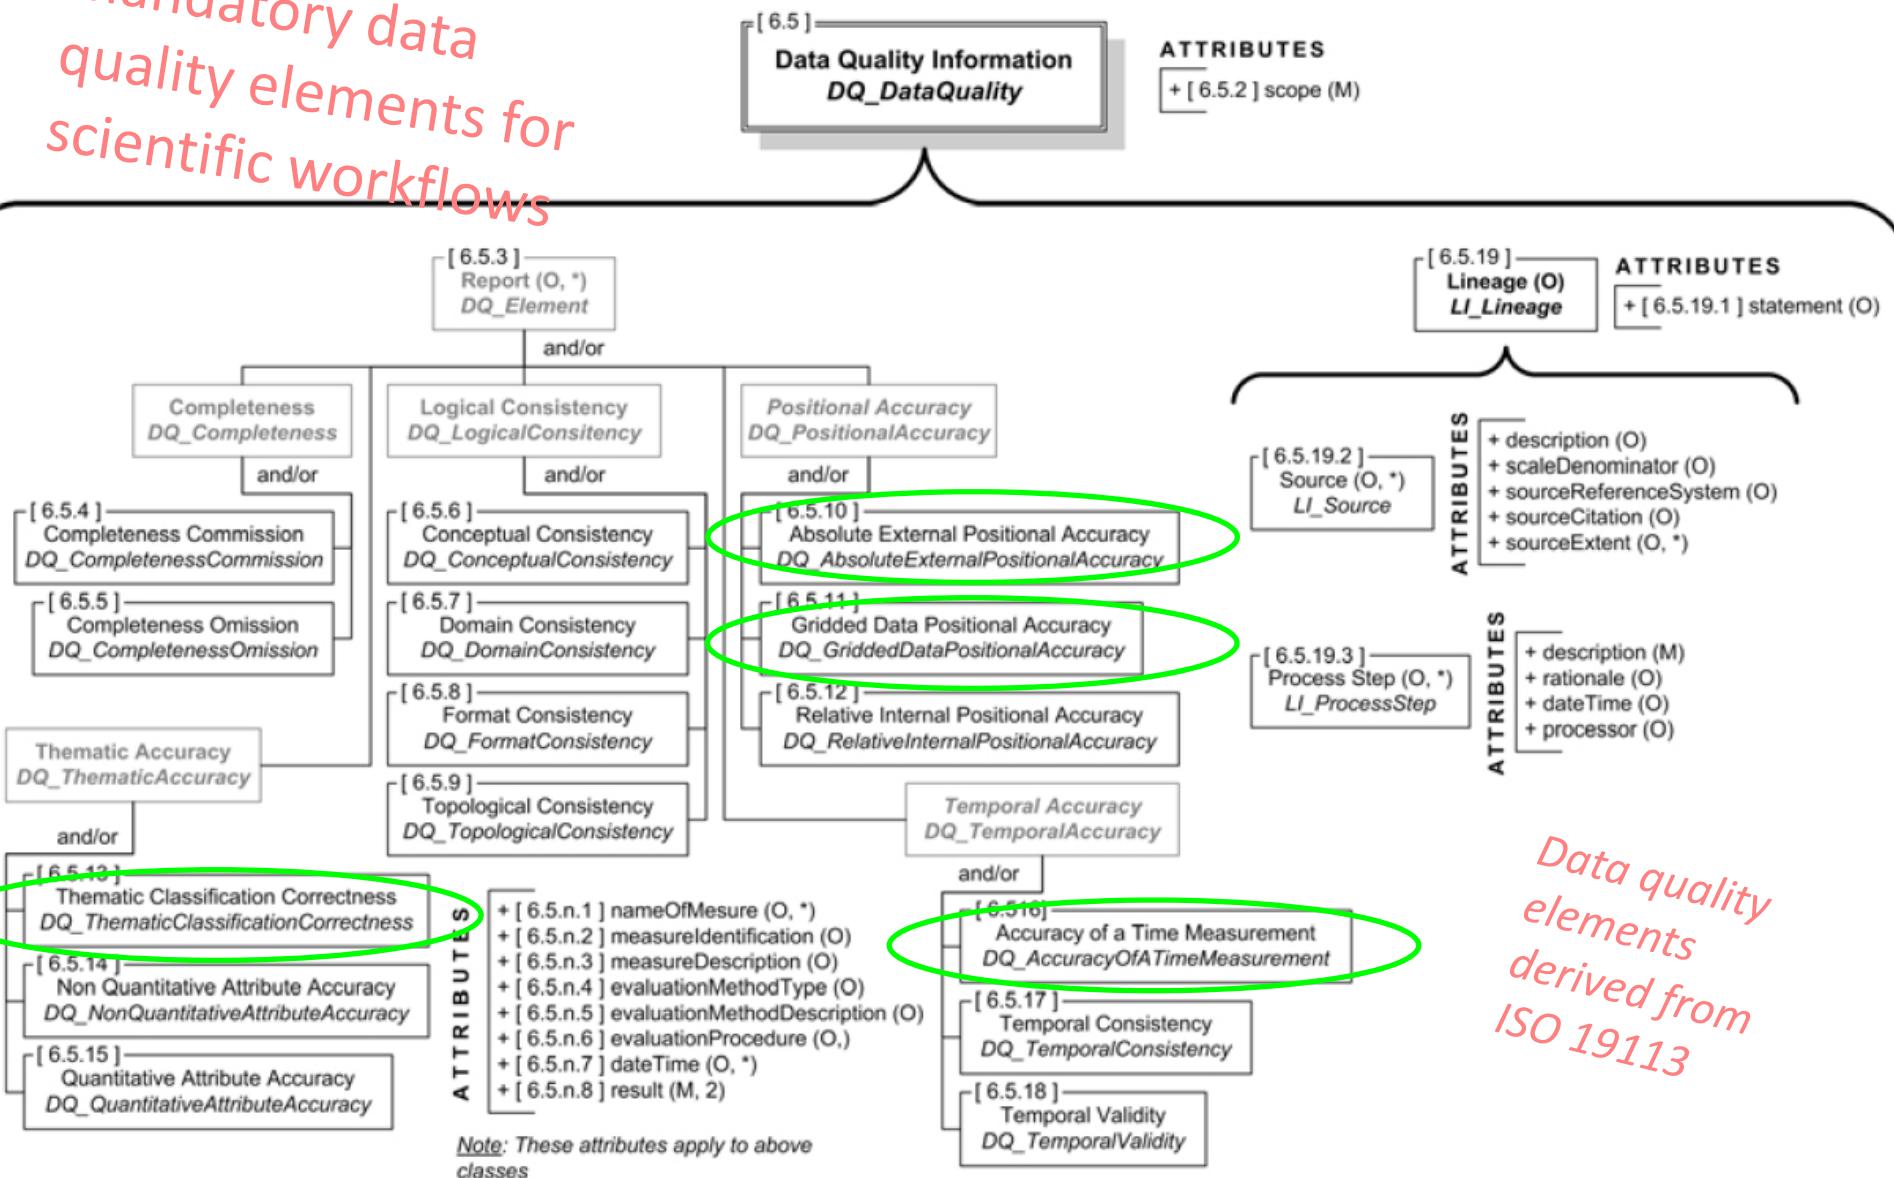

This section describes attributes and components that provide information about data quality.

Type: DQ\_DataQuality

EuroGEOSS

mandatory data  
quality elements for  
scientific workflows

Figure source: <http://www.fgdc.gov/nap/metadata/napMetadataProfileV101.pdf>

*Note: These attributes apply to above classes*

*Data quality  
elements  
derived from  
ISO 19113*

# Documenting Data Quality

ISO 19113 “Geographic information – Quality principles”

[http://www.iso.org/iso/catalogue\\_detail.htm?csnumber=26018](http://www.iso.org/iso/catalogue_detail.htm?csnumber=26018)

Lays out the principles for describing the quality of geographic data.

Used to assess -

- How well does a dataset meet its original specification?
- How well does the dataset meet the needs of a new application?

*Essential for  
use of data  
in modelling*

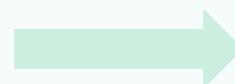

Positional Accuracy particularly relevant for current GBIF mediated data.

## Absolute external positional accuracy

closeness of reported coordinate values to values accepted as or being true

## Gridded data positional accuracy

closeness of gridded data position values to values accepted as or being true

Appropriate measures:

- circular error at 95%
- variance
- probability density function

# Metadata and Languages

Example network: International Long Term Ecological Research Network (ILTER)

Data providers to provide discovery level metadata in English

Initial focus on tools for metadata capture and translation: localised metadata editors; multilingual environmental thesaurus

[GEMET](http://www.eionet.europa.eu/gemet/), the GEneral Multilingual Environmental Thesaurus;  
27 languages. <http://www.eionet.europa.eu/gemet/>

[AGROVOC](http://www4.fao.org/agrovoc/default.htm); agriculture, forestry, fisheries, food and related domains  
e.g., environment; 20 languages. <http://www4.fao.org/agrovoc/default.htm>

## Long term solution: multilingual ontologies

[A Multilingual Metadata Catalog for the ILTER: Issues and Approaches.](#)

Vanderbilt, K.L., et al., Ecological Informatics, Volume 5, Issue 3, May 2010, Pages 187-193,  
[doi:10.1016/j.ecoinf.2010.02.002](https://doi.org/10.1016/j.ecoinf.2010.02.002)

# Metadata and Languages

Metadata standards vary in ability to allow use of multiple (natural) languages

EML – currently limited to a single language; investigations under way on how to “globalize” EML.

<http://mercury.nceas.ucsb.edu/ecoinformatics/mailman/listinfo/eml-dev>

ISO 19115/19139 provides comprehensive “locale” unit.

[http://inspire.brgm.fr/Documents/MD\\_IR\\_and\\_ISO\\_20080425.pdf](http://inspire.brgm.fr/Documents/MD_IR_and_ISO_20080425.pdf)

## MD\_Metadata

```
- <MD_Metadata>
  - <!--
      portions of metadata not shown, particularly the language and
      characterSet properties which are not detailed
    -->
  - <locale>
    - <PT_Locale id="locale-fr">
      - <languageCode>
        <LanguageCode codeList="resources/Codelist/gmxcodelists.xml#
          LanguageCode" codeListValue="fra"> French </LanguageCode>
      - <characterEncoding>
        <MD_CharacterSetCode codeList="resources/Codelist/gmxcodelists.xml#
          MD_CharacterSetCode" codeListValue="utf8">UTF
        8</MD_CharacterSetCode>
      - </characterEncoding>
    - </PT_Locale>
  - </locale>
  - <!-- portions of metadata not shown
</MD_Metadata>
```

## PT\_Locale

```
language : LanguageCode
country [0..1] : CountryCode
characterEncoding : MD_CharacterSetCode
```

<<CodeList>>

LanguageCode  
(from ISO 00639 Human Language)

<<CodeList>>

CountryCode  
(from ISO 03166 Country Codes)

<<CodeList>>

MD\_CharacterSetCode

```
- <abstract xsi:type="PT_FreeText_PropertyType">
  - <gco:CharacterString>
    Brief narrative summary of the content of the resource
  - </gco:CharacterString>
  - <!-- == Alternative value ==-->
  - <PT_FreeText>
    - <textGroup>
      <LocalisedCharacterString locale="#locale-fr">Resume succinct du contenu de la
      ressource</LocalisedCharacterString>
    - </textGroup>
  - </PT_FreeText>
</abstract>
```

## PT\_FreeText

1

```
+ country [0..1] : CountryCode
+ characterEncoding : MD_CharacterSetCode
```

# Knowledge Organisation Systems

The need for community supported dictionaries, vocabularies, thesauri and ontologies (Knowledge Organisation Systems - KOS) is a key issue for advancing interoperability.

# KOS in 2011 GBIF Work Programme

**Goal 2:** Facilitate development and deployment of standards

... facilitate, in response to community needs, development and deployment of vocabularies and ontologies for biodiversity data

**Activity 1:** Scope requirements for a standard for annotating data/metadata records

**Activity 2:** Scope requirements for a standard for describing species distribution data

**Activity 3:** Review geospatial web services in GBIF portal/network

**Activity 4:** Commission a task group on primary biodiversity data associated with genomic data

# Key questions for discussion

How can GBIF help? Infrastructure, tools, training

How are you using metadata? discovery; priority setting; automated scientific workflow; admin/stats

As a regional metadata network, what kind of network intersections do you envisage? within network, with GBIF, with others

What is the role of a central GBIF portal for metadata?

How do you propose to handle language issues?

What are your approaches to incentivising production of high quality, complete metadata?

Key activities for 2012-2016 work programme?

*Help us  
design the  
GBIF  
metadata  
system*
